

Adam Shea, Software Engineer

Quality-driven, hands-on software engineer with a focus on front-end development and building beautiful, accessible websites and applications. Eager to contribute to meaningful projects, collaborate with a team and continue to grow as an engineer.

HTML | CSS | JavaScript | React | NodeJS | Git/GitHub | Technical Writing | Figma

Work Experience

E-Commerce & Systems Administrator, TigerPress

Sept 2007 - Present

- Contribute to writing technical documentation, flow charts, and templates for internal processes and work instructions.
- Create custom queries, programs and reports using real-time data to help streamline our processes and help eliminate errors.
- Worked alongside our in-house developer to plan out and help build an internal e-commerce system that reps could use to create estimates, jobs and invoices that connect to a third party API.
- Maintain over a dozen third-party e-commerce websites and provide help desk support for their users.

Projects

Print Layout Calculator

A visual imposition calculator to help determine printing layouts to help myself and others at my current role. This is something that didn't exist within our space, and gets used every day by coworkers.

HTML, CSS, Vanilla JavaScript

DevFinder

A web app that leverages the GitHub API to search for and render user profiles. This was a FrontEndMentor challenge, which provides you with nothing more than a project scope and a Figma design file.

React, ViteJS, SWR Tailwind CSS

Personal Website

My personal website. This was my first time exploring parallax effects, and was a lot of fun to build. All components were built from scratch in Figma.

React, NextJS, Stitches CSS
